IEEE 802.15.4 Study

Yeon Hee Lee

IEEE 802.15.4

- a standard for the MAC and physical layer protocol of wireless networks দুধ্া ছন্। সেই সুথাক চু মুর্বির বির্বাচন মর্কর মর্কর বির্বাচন মর্কর বির্বাচন মর্কর বির্বাচন মর্কর বির্বাচন মর্কর বির্বাচন মর্কর বির্বাচন মর্কর মর্কর বির্বাচন মর্কর বির্বাচন
- for the low-rate wireless PAN(LR-WPAN) 저속 무선 개인 통신망을 위함
- for low power consumption and low cost communication network দ্ৰেল্কা, দ্ৰাও ছেএ
- 대표적으로 'ZigBee' 라 불림
- uses CSMA-CA medium access mechanism
- supports star topology and peer-to-peer topology
- 두가지 종류의 device types
 - FFD(full-function device)
 - RFD(reduced-function device)

Device Type

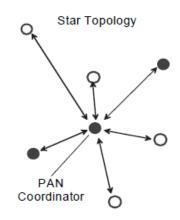

- 저전력,저소비 네트워크 구성을 위해 FFD, RFD 두가지로 나뉨

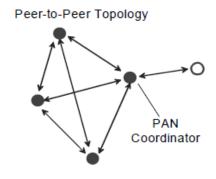

FFD (full-function device)	RFD (reduced-function device)
 PAN coordinator, coordinator, device로써 역할 수행 가능 RFD, FFD 모두와 통신 가능 (Routing) 	 End device로써 역할 수행 가능 Coordinator, Router에 붙어있는 간단한 기능의 제한된 Protocol의 저전력 장치를 지칭 오직 FFD와 통신 가능(RFD간 X) 메모리가 적게 들고 전력소비가 적어 FFD보다 가격이 저렴

Topology (네트워크의 물리적 연결 형태)

- Star topology
 - ✓ Single central controller(PAN coordinator)와 devices 간 통신
 - ✓ FFD와 RFD의 접속을 제어
 - ✓ 한 개의 PAN coordinator 존재

- Peer-to-peer topology
 - ✓ 범위 안의 어떤 devices 간에도 통신 가능
 - ✓ 다수의 coordinator 존재

● Full Function Device
● Reduced Function Device
← Communication Flow

Topology

- Cluster tree
 - ✓ Peer to peer network의 한 종류
 - ✓ 대부분의 Device가 Cluster tree network의 FFD
 - ✔ RFD는 leaf device 로서 네트워크의 끝 단에서 접속하게 됨
